

# Protect Your Business Security+

by  ITonDemand

Managed Information and Cybersecurity Services

# Security Centered, Service Driven

## Protect Your Business with Security+

As cyber threats continue to evolve, ITonDemand is dedicated to providing practical and comprehensive cybersecurity solutions. We achieve this through our platform, Security+.

Security+ is our tailored solution to manage cyber attacks facing your organization. We implement both the technology to detect and secure your information, staff, and infrastructure to ensure reliability, and enhance efficiency.

We empower our team members to provide world-class service that contributes to your success. The result is an unparalleled contribution to ensuring that your business is prepared, efficient, and secure.

We provide information security so that your end-users and customers trust your brand to enhance their lives.

### A History of Excellence

For over 20 years, ITonDemand has striven to provide the technical expertise our partners need for their businesses to thrive.

# The Threats are Real

We've done our due diligence. Cybercriminals used to disrupt business like yours solely for the notoriety of doing so. This is no longer the case.

The advent of ransomware and other "file loss" malware has taught hackers that their labor can be lucrative. Organizations large and small are falling victim to attacks targeting their end-users.

Without proper threat education, perimeter security, and breach detection, all businesses are vulnerable.

**What is Threat Hunting?**

Threat hunting tracks down attackers in your information space and stops them in their tracks before they have the chance to cause real damage. It's one of the ways ITonDemand works proactively to protect your business.

## Statistics on Cyber Threats

Enterprises account for 81% of all ransomware attacks.

\$8,500/hour due to ransomware induced downtime.

Ransomware creates a new victim every 14 seconds.

Spearphishing attacks could not be distinguished by 9 out of 10 employees.

It takes businesses an average of 196 days to detect a breach.

# Let's Face Them, Together

Don't think of us as your IT provider. Think of us as your partner. Our partner-mentality drives us to provide the absolute best service for your organization.

We proactively seek out threats against your business while providing the services your team needs to be productive and efficient.

Communication tools are implemented with best-practice policies. File-sharing is secure with authenticated access. This means your team can collaborate and communicate and you can have peace of mind.

Partnering with ITonDemand gives you the technical support and expertise usually reserved for Fortune 500 organizations at a fraction of the in-house cost.

We believe that: We win together.

## The Best Defense is a Great Offense

Security+ offers your business 8-stage cybersecurity and threat prevention designed to minimize both downtime and the associated damages of a digital attack.

# Security+

## Services and Support

ITonDemand protects the endpoints that exist within your office.

Cloud Secure

Secure and verify connections and access across cloud-based resources.

Educate

Prepare your staff with security education, training, and testing on how to handle the threat of phishing and end-user focused malware.

Cloud Identity

Enforcement of security policies during access to cloud resources through our CASB.

Authenticate

Verify the identity of all users with multi-factor authentication throughout your business' technology stack.

Security+ equips your business with the necessary tools and expertise to protect your sensitive information.

### Email Security

Advanced email security including robust filtering, managed SPF/DKIM, and outbound email encryption.

### Edge Security Management

Protect the perimeter of your digital environment through advanced firewall management, AI-driven SIEM, and end-user content filtering.

### End-Point Protection

Proactively protect, detect, and respond to threats hiding within your endpoints, data centers, or cloud environments. Our breach detection service hunts for the unaddressed techniques hackers use to gain access to your systems.

### Respond

Our rapid response team secures your data, devices, and network in the event of a detected intrusion or malicious intent.
